EDUCATION

ESSEC Business School & CentraleSupélec , France	2025 – 2027
<i>Master in Data Science & Business Analytics (Grande École)</i>	
Coursework: Machine Learning, Statistical Modelling, Optimisation, Probability, Econometrics	
Kalasalingam Academy of Research and Education , India	2021 – 2025
<i>B.Tech in Computer Science & Engineering (Data Science)</i>	

PROFESSIONAL EXPERIENCE

Elevate Labs	Bangalore, India — 2025
<i>Data Analyst Intern</i>	
- Analysed large-scale advertising datasets (1M+ rows) to extract actionable insights, directly informing campaign optimisation decisions and driving measurable improvements in conversion rates - Designed and deployed interactive Power BI and Tableau dashboards tracking 10+ KPIs, reducing manual reporting time by 60% and enabling real-time performance monitoring for cross-functional stakeholders - Engineered automated ETL pipelines using Python and SQL to consolidate multi-source data, improving data reliability and reducing analyst processing time across weekly reporting cycles	

PROJECTS

Supply Chain Intelligence Platform Live Demo	2025
- Architected an end-to-end ML pipeline ingesting daily records from FRED and World Bank APIs into a cloud PostgreSQL database, with incremental loading, idempotent upserts, and automated daily refresh via GitHub Actions CI/CD - Engineered forecasting module using Facebook Prophet achieving 90-day commodity price prediction, Isolation Forest for anomaly detection on Baltic Dry shipping indices (337 anomalies detected), and correlation analysis quantifying oil-freight price relationships across 6 countries - Deployed interactive Streamlit dashboard exposing 5 executive-level supply chain KPIs and a what-if scenario simulator for oil price shocks.	
AI Code Review Agent Live Demo	2025
- Built an LLM-powered code review agent that clones any public GitHub repository, parses every function and class from Python and Java files using AST analysis, and sends each chunk to Groq's LLaMA 3.3 70B for automated structured feedback - Engineered a review pipeline returning severity levels (Critical / Warning / Suggestion), issue categories (Bug, Security, Performance, Readability, Style), and confidence scores, with low-confidence results isolated into a separate verification tab - Implemented GitHub PR integration using PyGithub to post formatted review comments onto pull requests and deployed live on Streamlit Cloud with JSON/CSV export and real-time filtering	
AI-Based CCTV Monitoring System	2024
- Built a real-time computer vision pipeline using OpenCV and deep learning-based object detection to flag security incidents across live CCTV feeds with sub-second inference latency at scale - Reduced false positive alert rate by implementing multi-frame object tracking and rule-based contextual filtering, significantly improving system precision for production deployment - Integrated automated SMTP alerting with timestamped incident logs, eliminating continuous manual monitoring and enabling rapid incident response	

TECHNICAL SKILLS

Machine Learning: scikit-learn, Prophet, Isolation Forest, XGBoost, Deep Learning (PyTorch fundamentals), OpenCV
Programming: Python (advanced), SQL, R, Java, C++
Data Engineering: ETL Pipelines, REST APIs, PostgreSQL, Supabase, Docker, CI/CD (GitHub Actions)
Analytics & Visualisation: Pandas, NumPy, Matplotlib, Streamlit, Power BI, Tableau, Statistical Modelling
Tools: Git, pytest, MS Office

CERTIFICATIONS & ACHIEVEMENTS

- Career Essentials in Data Analysis — Microsoft (2025)
- Data Analyst Certification — Techwave Solutions (2025)
